

Day 49 - 90 days of Analytics : Relationships in Power BI

In today's video, we looked at how to create relationships in Power BI

The following were mentioned

- It is good practice to always clean data before usage. This is done using the Power Query Editor
- Report view** helps in creating any number of report pages with visualizations.
- Data view** helps us to inspect, explore, and understand data in our Power BI Desktop model.
- Model view** shows all of the tables, columns, and relationships in our model. This view can be especially helpful when models have complex relationships between many tables.
- As mentioned in the point above, relationships are managed in the Model view of Power BI
