

## Day 51 - 90 days of Analytics : Slicer and Drill

In today's video, we saw how to produce slicers and how to use the drill down or drill up functions

The following were mentioned

- To insert a slicer, under the menu "Add data to your visual", we select the "**Slicer**" option. When we click on it, a slicer will appear on the working area. Then we add field to it according to our preferences.
- Drill down must be activated before we can drill up and get insight of data.
- The drill option permits us to reduce the number of reports to be produced thereby increasing efficiency.
