Day 59 - 90 days of Analytics: Basic Operations in Python

In today's video, we looked at some basic mathematical operations in python

The following were mentioned

-Comments in python are preceded by the hash (#) symbol

-Doc Strings are place between three double quotation marks

-Arithmetic operators in python may include

- Addition(+)
- Subtraction(-)
- Multiplication(*)
- Division(/) which returns a float
- Floor division(//) which returns an integer
- Modulus(%)
- Exponent(**)

-The assignment operator is equal to (=)

-Python follows the BODMAS rule in arithmetic operations.

- B-Brackets
- O-Of
- D-Division
- M-Multiplication
- A-Addition
- S-Subtraction
