Day 85- 90 days of Analytics: Git Basics

In today's video, we looked at the basics of Git. How to manipulate files and folders.

The following were mentioned

-To create a new folder, we use the **mkdir** command. Example `mkdir myproject`

-To change directory, we use the **cd** command. Example `cd myproject`

-To navigate to the parent directory, we the **cd** command. Example `cd ..`

-To list all files and folders in a directory, we use the **ls** command. Example `ls`

-To create a file on git bash, use the **touch** command. Example `touch text.txt`

-To delete a file, we use the **rm** command. Example `rm text.txt`

-To delete a directory, we use the **rmdir** command. Example `rmdir Sample`
